Health Record Requirement

All incoming students are required to submit health information, including documentation of immunizations, as required by the Code of Virginia, Section 23.1-800, which states:

No full-time student who enrolls for the first time in any baccalaureate public institution of higher education is eligible to register for his second semester or quarter unless he (i) has furnished, before the beginning of the second semester or quarter of enrollment, a health history consistent with guidelines adopted by each institution's board of visitors that includes documented evidence, provided by a licensed health professional or health facility, of the diseases for which the student has been immunized, the numbers of doses given, the date on which the immunization was administered, and any further immunizations indicated or (ii) objects to such health history requirement on religious grounds, in which case he is exempt from such requirement.

Please note the following requirements prior to submitting your health record form:

- If you will be under age 18 upon arrival on campus, parent or legal guardian signature is required on the Health Record Form and the Consent for Treatment of Minors.
- Healthcare Provider signature (must be MD, DO, NP or PA) on Certificate of Immunizations.
- Waivers signed, if applicable, for Hepatitis B and/or Meningococcal vaccines.
- Medical Exemption, if applicable, signed by healthcare provider (MD, DO, NP or PA) or Health Department Official.
- Healthcare Provider (MD, DO, NP or PA) signature on Tuberculosis Screening.

Submitting Your Health Record Form

You may submit this completed Health Record Form, or, alternately, you may submit compiled documentation for the immunizations outlined on this Health Record Form. Immunization records may be obtained by contacting your family doctor, your parents, the high school from where you graduated, previous university attended, military immunization records, or your local health department.

Failure to submit your immunization history, incomplete immunizations, and/or missing documentation will result in being blocked from course registration your second semester.

To submit online
Visit the secure Medicat website at https://Radford.medicatconnect.com. Choose Radford University as your college and log-in using your Radford University credentials (username & password) to access the online system.

To submit using fax, mail, or email
Use the appropriate contact information included in the footer section of this page. Please include your full name, date of birth, and Student ID with any submitted documentation.

Deadline and Contact

Your completed Health Record Form (or compiled immunization history) must be submitted prior to the beginning of your first semester. If you have any questions or concerns regarding the completion of your record, please contact the Office of Admissions using the contact information below.
To meet the requirements of the Commonwealth of Virginia Law (Code of Virginia, Section 23.1-800) all required immunizations must be current and appropriately documented on the Radford University Health Record, Certificate of Immunization, and Tuberculosis Screening form completed and signed by a physician or licensed health care provider. The completed forms must be submitted to the Office of Admissions prior the start of classes.

Using your RU credentials, log in to Medicat at https://radford.medicatconnect.com or through the MyRU Portal and manually enter vaccine administration dates, test results, and upload all three pages of this form. If you prefer, you may choose to fax, mail, or email your Health Record Form (or compiled immunization history) using the contact information included in the footer section of this page.

**Personal Information**

Name ___________________________  
Last           First           Middle

Student ID# ___________________________  
(Student ID # is required to process this form.)

Date of Birth ______ / ______ / ______  
Age ______  Gender ______  
Marital Status ___________________________

College Address ___________________________

Tuberculosis Screening (Required)

TO BE COMPLETED BY YOUR HEALTH CARE PROVIDER.
Note: TB screening must be completed within six months.

1. Does the student have signs or symptoms of active TB disease?  □ YES  □ NO

   IF NO, proceed to question 2.
   IF YES, proceed with additional evaluation to exclude active TB disease including tuberculin skin testing, QFT-TB test, chest x-ray and sputum evaluation as indicated. Documentation required that all tests are negative or that treatment is effective and student free of communicable disease.

2. Is the student a member of a high-risk group?  □ YES  □ NO

   Categories of high-risk students include those: with HIV infection; who inject drugs; who have resided in, volunteered in or worked in high-risk congregate settings such as prisons, nursing homes, hospitals, residential facilities for patients with AIDS, or homeless shelters; and those who have clinical conditions such as diabetes, chronic renal failure, leukemias or lymphomas, low body weight, gastrectomy and jejunoileal by-pass, chronic malabsorption syndromes, prolonged corticosteroid therapy (e.g. prednisone > 15 mg/d for > 1 month) or other immunosuppressive disorders.

   If NO, continue to question 3.
   If YES, perform TST or obtain QFT (preferred). If positive TST, obtain QFT.

   TST:
   Date given: ______________  Date read: ______________  Result: ______ mm (transverse induration)

   QFT-TB:
   Date obtained: ______________  Result:  □ Positive  □ Negative
   If positive QFT, see Interpretation below.

   Interpretation (based on mm of induration and risk factors)  □ Positive  □ Negative

   If positive, please obtain QFT:
   Date obtained: ______________  Result:  □ Positive  □ Negative

   If positive QFT, please obtain CXR:
   Date obtained: ______________  Result:  □ Normal  □ Abnormal
   If abnormal, return to Question 1 - yes

   If normal CXR, please initiate INH:
   Date initiated: ______________  Date Completed: ______________

3. Was the student BORN in, or have they LIVED in or TRAVELED to countries OTHER than those listed below?  □ Yes  □ No
Albania, American Samoa, Andorra, Antigua and Barbuda, Aruba, Australia, Austria, Bahamas, Barbados, Belgium, Bermuda, British Virgin Islands, Canada, Cayman Islands, Chile, Cook Islands, Costa Rica, Cuba, Curacao, Cyprus, Czech Republic, Denmark, Dominica, Egypt, Finland, France, Germany, Greece, Grenada, Iceland, Ireland, Israel, Italy, Jamaica, Jordan, Lebanon, Luxembourg, Malta, Monaco, Montenegro, Montserrat, Netherlands, New Zealand, Norway, Oman, Puerto Rico, Saint Kitts and Nevis, St. Lucia, Samoa, San Marino, Saudi Arabia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tokelau, Tonga, Trinidad & Tobago, United Arab Emirates, United Kingdom, United States Virgin Islands, West Bank and Gaza Strip, United States of America

   IF NO, no TST is required. Please sign below.
   IF YES, obtain QFT:
   Date obtained: ______________  Result:  □ Positive  □ Negative

   If positive QFT, please obtain CXR:
   Date obtained: ______________  Result:  □ Normal  □ Abnormal
   If abnormal, return to Question 1 - yes

   If normal CXR, please initiate INH:
   Date initiated: ______________  Completed: ______________

Health Care Provider Signature (MD, DO, NP, PA) Required as Validation of TB Assessment
Current CDC guidelines recommend treatment of positive results. To verify positive TST results, a serology IGRA (QFT) should be obtained. A CXR only confirms active disease and does not rule out latent disease.

Description of Required Vaccinations/Screening

1. Hepatitis B: Students must have documentation of a completed vaccination series. The Twinrix immunization series is an acceptable alternative, as is a titer proving immunity (please provide a copy of the report with the date and result of positive titer). Students may choose to sign a waiver for this immunization.

2. Meningococcal Vaccine: For students younger than 22 years of age, one dose of vaccine required after age 16 or signed waiver. Meningitis B vaccines (Trumenba and Bexsero) do not meet this requirement.

3. Measles, Mumps, Rubella (MMR): Two doses of MMR or individual vaccines of each required, at least 4 weeks apart, given on or after the first birthday. Not required if born before 1957. Titers proving immunity are acceptable; please provide a copy of the report with the date(s) and result(s) of positive titer(s).

4. Tetanus Diphtheria-Pertussis: Primary series (DTap, DTP, DT or Td) plus booster within the last 10 years of fall entry or spring entry. Tdap is the preferred one time booster. Tdap may be given regardless of interval since last Td.

5. Polio: Completed primary series is required. Please provide all dates as well as any boosters received since that date. A titer proving immunity is acceptable; please provide the date of a positive titer; please provide a copy of the report with the date and result of positive titer.

Tuberculosis Screening/Testing: “Tuberculosis Screening” is required for all students. “Tuberculosis Testing” is also required for students who answer “yes” to any question on page 4. All screening/testing must be completed on or after 2/1 (fall entry) or 7/1 (spring entry).

Description of Recommended Vaccinations

1. Neisseria meningitides (Meningitis) serogroup B vaccine: Recommended for high risk students with a history of persistent complement component deficiencies or patients with anatomic or functional asplenia. May also be given to anyone 16-23 years old to provide short-term protection. This can be either a two or three shot series depending upon the vaccine (Trumenba or Bexsero). The same vaccine must be used for all doses.

2. HPV Vaccine: The three-shot series is recommended for all females ages 11-26 and males ages 11-21. It is also approved for males up to age 26 in certain situations, see CDC guidelines.

3. Hepatitis A: Either alone or in combination with Hepatitis B as Twinrix (combination of Hepatitis A & B). Entering this information in the Hepatitis B section and indicating Twinrix is sufficient documentation.

4. Pneumococcal Vaccine: Recommended for high-risk individuals. CDC recommends PCV13 for use in infants and young children and adults 65 years or older. Older children and adults younger than 65 years old who are at increased risk for getting pneumococcal disease may also need a dose of PCV13.

5. Varicella (chicken pox): Two doses of vaccine, at least 4 weeks apart, is strongly recommended for all college students without other evidence of immunity (e.g. born in the U.S. before 1980, a history of disease, or a positive antibody).

6. Influenza (Flu) vaccine: All students are strongly encouraged to receive seasonal influenza (flu) vaccine when it is available beginning in early fall.
### Waiver Information for Meningococcal Disease & Hepatitis B

Please read and review the following information on Hepatitis B and Meningococcal Disease and before signing the waiver on the Certificate of Immunization.

<table>
<thead>
<tr>
<th>Hepatitis B</th>
<th>Meningococcal Disease</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hepatitis B is a potentially fatal disease that attacks the liver. The virus can cause short-term (acute) illness that leads to loss of appetite, tiredness, diarrhea and vomiting, jaundice (yellow skin or eyes) and pain in muscles, joints and stomach. Many people have no symptoms with the illness. It can also cause long-term (chronic) illness that leads to liver damage, liver cancer and death.</td>
<td>Meningococcal disease is the leading cause of bacterial meningitis in children 2-18 years old in the U.S. Meningitis is an infection of the brain and spinal cord coverings.</td>
</tr>
</tbody>
</table>

According to the Centers for Disease Control, about 800,000 – 1.4 million people in the U.S. have chronic Hepatitis B infection. Each year approximately 40,000 people, mostly young adults, become infected with Hepatitis B virus. Young adults are more likely to contract Hepatitis B infection due to greater likelihood of high-risk behaviors such as multiple sexual partners. | Meningococcal disease can also cause blood infections. According to the Centers for Disease Control, about 2,600 people get meningococcal disease each year in the U.S. Of these cases, 10-15% die and of those who live, another 10% may require limb amputation, develop kidney failure or brain damage, become deaf, suffer seizures or strokes. |

Approximately 3,000 people die from chronic Hepatitis B infection annually. It is spread through contact with blood and body fluids of an infected person, such as having unprotected sex with an infected person or sharing needles when injecting illegal drugs. Unvaccinated health-science students are at risk of contracting Hepatitis B through an accidental occupational needle stick exposure. | College freshmen, particularly those who live in dormitories, have a slightly increased risk of getting meningococcal disease as illustrated by a case rate of 5.4/100,000 18-23 year olds as opposed to a case rate of 1.4/100,000 18-23 year olds in the general population. |

There are several ways to prevent Hepatitis B infections including avoiding risky behavior, screening pregnant women and vaccination. Vaccine is the best prevention. The vaccine series typically consists of three injections given over a six month period, which are available through your private health care provider, health department or Student Health Services. Remember: Completion of the vaccine series is needed for protection against Hepatitis B disease. | Meningococcal vaccine is effective in preventing four types of meningococcal disease including two of the three most commonly occurring types in the U.S. The vaccine is 85-100% effective in preventing serotype A and C in older children and adults. It does not however protect against serotype B which causes one third of cases in patients 15-24 years. Therefore, in the event of an outbreak, even previously immunized individuals should contact their health care providers. ACIP recommends routine vaccination of persons with meningococcal conjugate at age 11 or 12 years with a booster dose at age 16. Persons who receive their first meningococcal conjugate vaccine at or after 16 years do not need a booster dose. Routine vaccination of healthy persons 21 years or older who are not at increased risk of exposure to N. Meningitides is not recommended. The vaccine is available through your private healthcare provider, most local health departments and Student Health Services. |
