1. PURPOSE

Radford University (University) is committed to continuously improving the delivery of information technology (IT) solutions within budget, on schedule, within scope, and in such a way as to best contribute to accomplishing the University’s strategic mission. The Information Technology Project Management Policy furthers this goal by establishing the common and consistent application of project management best practices, principles, and tools in the management of IT projects including project auditing. A uniform project management framework promotes consistency and better control of IT projects, thereby reducing risks and increasing project successes.

2. APPLICABILITY

The Information Technology Project Management Policy applies to all members of the University community involved in IT projects.

3. DEFINITIONS

**IEEE Standard 1012-2016 for System, Software, and Hardware Verification and Validation:** Issued by the Institute of Electrical and Electronic Engineers (IEEE), System, Software, and Hardware Verification and Validation (V&V) processes determine whether the development products of a given activity conform to the requirements of that activity and whether the software satisfies its intended use and user needs. V&V processes include analysis, evaluation, review, inspection, assessment, and testing of software products.

**Independent Verification and Validation (IV&V):** Method whereby an independent entity with appropriate experience and expertise evaluates the work product of a given project.

**Information Technology (IT) Project:** A temporary effort undertaken by the University having as its primary purpose the creation of a unique information technology product or service. Temporary means the project has a definite beginning and a definite end. Unique means that the technology product or service is different in some distinguishing way from all other products or services provided (see related Standard for more information).

**Institute of Electrical and Electronic Engineers (IEEE):** IEEE is the world’s largest technical professional organization for the advancement of technology. The core purpose of IEEE is to foster technological innovation and excellence for the benefit of humanity.
International Organization for Standardization (ISO): ISO is the world’s largest developer of standards, the organization is made up of representatives from governmental and private sector standard bodies, e.g. the American National Standards Institute.

ISO Quality Management Systems -- Requirements (ISO 9001:2015): Issued by the International Organization for Standardization (ISO), the ISO 9001:2015 specifies requirements for a quality management system for any organization that needs to demonstrate its ability to consistently provide product that meets customer and applicable regulatory requirements and aims to enhance customer satisfaction.

Project Auditing: A formal type of project review, most often designed to evaluate the extent to which project management standards are being followed.

Project Management: The application of knowledge, skills, tools, and techniques to mitigate risk, control budget, and manage scope of tasks.

Project Management Institute (PMI): The world’s leading not-for-profit professional association in the area of project management.

SEI Capability Maturity Model Integration (SEI-CMMI): Developed by the Software Engineering Institute (SEI), the SEI-CMMI outlines the methods to obtain software process maturity. Several levels of maturity can be reached as an organization’s software project management evolves from that of chaotic non-repeatable performances to repeatable mature disciplined software processes. The model focuses on key attributes of each improved maturity level and provides guidance on the best practices used to achieve each level. The goal is to reach an efficient and disciplined approach to software management.

Software Engineering Institute (SEI): The SEI is a Federally Funded Research and Development Center sponsored by the US Department of Defense and is based at Carnegie Mellon University. The SEI has been helping government and industry organizations to acquire, develop, operate, and sustain software systems that are innovative, affordable, enduring, and trustworthy.

University Community: For the purpose of this policy, all persons who are employees, students, contractors, volunteers, and visitors, including invited guests, of the University.

4. POLICY

A. Information technology projects will be managed in accordance with best practices promoted by the nationally recognized Project Management Institute (PMI), appropriately tailored to the specific circumstances of the University. Projects that engage leading IT consulting or software development firms to assist with project management may apply additional best practices provided by these firms.

B. Methods used for project auditing, such as Independent Verification and Validation (IV&V), will be aligned with industry best practices, consultant expert guidelines, and known industry accepted standards such as Institute of Electrical and Electronics Engineers (IEEE) Standard 1012-2016 for System, Software, and Hardware Verification and Validation, International Organization for Standardization (ISO) 9001-2015 series, and Software Engineering Institute (SEI) Capability Maturity Model Integration (SEI-CMMI). These methods will be tailored to the higher education environment by internal departments and in coordination with consultants as warranted.
5. PROCEDURES

The Division of Information Technology (DoIT) has developed specific standards, procedures, and guidelines, as appropriate, for the implementation of this policy and the management of the information technology functions of the University. These standards, procedures, and guidelines are maintained and hosted by DoIT due to the technical and sensitive nature of the information security program. Publicly accessible standards, procedures, and guidelines may be found at http://www.radford.edu/content/it/home/it-policies.html. Other internal standards, procedures, and guidelines of a sensitive nature are available upon request to appropriate and relevant parties by contacting DoIT.

6. EXCLUSIONS

The scope of this policy does not extend to research projects, research initiatives, or instructional programs.

7. APPENDICES

None

8. REFERENCES

9. AUTHORITY AND INTERPRETATION

Information technology is managed under delegated operational authority granted to the University by the Virginia General Assembly, as set forth in the Restructured Higher Education Financial and Administrative Operations Act, § 23.1-1000 et seq. of the Code of Virginia, and Chapters 824 and 829, Acts of Assembly, 2008. The Board of Visitors (Board) approved the University to operate under this delegated authority in Board resolutions dated April 23, 2009, and May 4, 2012. Accordingly, the authority to interpret this policy rests with the President of the University and is generally delegated to the Vice President for Information Technology and Chief Information Officer (CIO).

10. APPROVAL AND REVISIONS

The Information Technology Project Management Policy was initially approved by the Radford University Board of Visitors on September 4, 2008, and was revised May 6, 2009.
In the Board of Visitors Resolution, Approval to Continue Level II Authority, Dated May 4, 2012, the President and the Vice President for Information Technology and Chief Information Officer (CIO) were granted full continuation of the authority and responsibility for the management of the information technology function for the University.

The new Information Technology Project Management Policy, reformatted into the University-wide policy template, was submitted to and approved by the President’s Cabinet at the meeting held on January 8, 2018, and was signed by President Hemphill on January 10, 2018.
