MATH PROFESSOR LAUNCHES PRINTED JOURNAL

Mathematics professor Wei-Chi Yang, editor-in-chief of the *Electronic Journal of Mathematics and Technology*, has announced the launch of *The Research Journal of Mathematics and Technology*. The newest journal in his quiver is a printed version of selected articles from the electronic journal.

"The purpose of the journal is to provide for those readers who would like to read articles in print rather than online. Therefore, the *Research Journal of Mathematics and Technology* is to complement and enhance the needs of the electronic journal, where we encourage readers to experiment and discover mathematics when supplementary electronic files are available," says Yang.

The printed journal will be published semi-annually in June and December of each year with the first edition in June 2012.

Both journals' areas of interest are research in mathematics and its applications and mathematics education with technology, instruction in mathematics and its applications with technology, and newly emerging technologies in mathematical fields. All articles are peer-reviewed and published in the electronic journal first.
